HOW MUCH LIFE INSURANCE COVER DO YOU NEED?

A lot of people go through their entire life without even understanding what life insurance is all about. There may be several reasons for this. The most common being that they would not be informed by the right person of the facts. Even if a person has been likely approached by a person (say insurance agent), there is every chance that you may have got inadequate information so that you could be sold what that person wanted rather than what you may have needed.

Insurance is perhaps the only product where you create an asset against a possible risk. Life insurance is nothing but a provision for providing for the financial future of your family in such a way that your absence does little or no financial harm to your family. The very critical element here is the amount of cover. Your life insurance policy cover should be adequate to provide for your family in your absence. In this article, we will attempt to give you some quick methods to estimate the same and give you some understanding and perspectives on calculating this cover amount.

HOW MUCH YOU NEED?

One cannot pinpoint the exact amount of life insurance one needs. But there are many methods of arriving at a sound estimate for your coverage requirement. Here are a few ideas to let you start thinking...

1. Universal thumb rule

This is a very simple and straight forward method. Here we would simply use a multiple of say 10 times and consider the gross, pre-tax income of the person being insured. Assuming a gross income of ₹15 lakhs yearly, the insurance need would

come to be of ₹1.5 cores or between a range of 1.2 cores to 1.8 cores. The reason we use this is that it normally gives us just enough amount to meet the regular household needs for the family. However, a lot depends on the financial situation of the family/person.

2. Income Replacement method:

There is another small variation to the universal thumb rule. Here we would consider the number of active earning years remaining, instead of a random number, for the net, post-tax, monthly income instead of the gross income. For example, for a person aged 40, having an in-hand monthly income ₹100,000 and a retirement age of 60, there would be 20 years of active service left. One can now simply multiply ₹12 lakhs yearly x 20 times. This will give you a life insurance need of ₹2.4 cores.

Of course, we can stop here but there are some key parameters ignored here, and we could adjust this figure further to make it more appropriate. One smart way to do that would be to consider the adjusted

investment interest rate which is calculated as $[(1 + \text{returns}) / (1 + \text{inflation}) - 1]$. This factor will adjust your figure for returns earned on the insurance kitty investment and the inflation over time. The idea is to discount the above figure of 2.4 cores for 20 years with this factor. Assuming 8% returns, 6% inflation, ₹2.4 crore divided by the adjusted investment interest rate of 1.89% for 20 years $[(1 + 1.89\%)^{20}]$ would give you a kitty of ₹1.65 cores which sounds more reasonable.

3. Withdrawal Ratio method:

Under this approach, it is assumed that the policy money will be invested and the income/withdrawals from this investment should be sufficient to finance your expenses over the foreseeable future. Note that in the previous method we will consider the entire net income and here we are only considering a part of it which goes towards financing household expenses.

Let us see this with an example. Your monthly expenses are said ₹50,000

cont. on page no. 3

amounting to ₹6,00,000 yearly. With a withdrawal rate of 4%, the corpus needed would be ₹1.50 crores (₹6,00,000 divided by 4%). The 4% is borrowed from the very popular rule under which people use this 4% to calculate retirement kitty. This can be applied here also. To be on a safer side, the withdrawal rate of 3% would give us ₹2 crores (₹6,00,000 divided by 3%).

4. The Human Life Value method:

This is a more detailed method of calculating the life insurance need. Here we consider all important elements like the earning years remaining, the present net income, the estimated income rise, the present liabilities, and the major financial goals the person is expected to achieve during this lifetime. We present the method here not to tempt you to calculate but to at least help you understand the concept.

STEP 2

Add present values of all future life goals:

In this step, the present value of all future goals like child education, purchase of a home, marriage for the girl child, etc., is considered. We need to arrive at this figure by dividing each goal amount with the adjusted investment interest rate for the years remaining.

STEP 3

Add all the existing loans/liabilities (less assets):

To the above-calculated figure, we need to add all existing loans/liabilities. This would include all home/car loans, credit card bills, personal loans, etc. This figure will be reduced to the extent of any existing assets that you have so that the life insurance need is reduced to that extent.

The above three steps should give you a fairly accurate amount of life insurance needed.

What to buy?

We would first urge you to never mix investment with insurance. There are two basic types of life insurance products sold in the market – traditional life insurance policies and the pure term policies. For

obvious reasons, the pure term policies are not suggested by many insurance agents to their clients. The general understanding among experts is that the traditional life insurance policies, which promise some returns in addition to the return of premiums paid and life cover, offer sub-optimal returns while offering a low life cover. They are generally costly and in the event of a death, the amount of life cover is often grossly inadequate to meet family needs. The purpose of buying such a policy gets defeated on day one itself.

Pure term policies, on the other hand, are cheap and offer the maximum life cover possible. This matches perfectly to our objective of family well-being in our absence. One can simply ignore the fact that there would be no return of premium amount, just like you do when you pay for say a car insurance premium. Any savings on account of low premiums can be diverted towards mutual funds SIPs to build wealth over time. Thus, this way, you get the best of both worlds – maximum cover from day one and long-term wealth creation through SIPs, if you survive.

CONCLUSION:

There is no perfect way to calculate the value of a person. We do not wish to do that as a human being can never be replaced. The absence of a person, however, does not take away the fact that life has to go on; the survival and fulfilment of the dreams of those left behind are what matters now. The aim of any method is simply to gauge the figure which can make sure that the lives of our loved ones are not compromised due to paucity of finances.

As already discussed, there are many ways and variations in methods of calculating the life insurance need. No one can claim that one method is perfect. The decision rests on us to choose and modify any particular method to suit our needs and requirements. We would strongly suggest that one approaches a qualified insurance advisor or a financial planner to help you make the calculations and arrive at the right figure. We also hope that you assess your present life insurance cover in the context of this article, take adequate life cover as soon as possible and enjoy peace of mind.

Declutter: WHAT YOU NEED TO DO FOR EVERYTHING, INCLUDING FINANCE.

Leonardo da Vinci once said that “simplicity is the ultimate sophistication.” This quote still stands very true for everyone today and for everything, be it mind or heart, relationships, home, work or money. One of the best ways to achieve simplicity is to declutter. In this article, we will attempt to make a case for decluttering and how to do it.

Why declutter matters?

There are obvious benefits for decluttering. We live in a world of many. Today getting anything is very easy, just a click away. There are many distractions, updates, communications, events happening at virtually every second. The world today is smaller, and we find a lot of things happening around us. Often, we find our head spinning with so many choices around us. Here are the obvious benefits we will enjoy once we walk on the path of decluttering.

- ✓ **Saves time:** by removing time we spend on unnecessary things
- ✓ **Make better choices:** making by removing unnecessary things /details
- ✓ **Helps prioritise:** from among many things
- ✓ **Bring focus:** on things which are really needed
- ✓ **Aids memory:** by reducing the things we need to remember
- ✓ **Being consistent:** by simplifying things
- ✓ **Get peace:** by removing complexities

How to declutter and achieve simplicity?

Simplicity is something that many of us desire but many do not know how to do so. Here are the important steps to do so.

TARGET

The first step is to decide what to declutter? Since almost everything around us may be decluttered, deciding where to start is an important step. Choose an area or subject which you feel requires urgent attention and has been draining you out mentally or physically. This could be your finances, relationships or even your kitchen or wardrobe.

LEARN

The first step is to learn how clutter and lack of simplicity are impacting your time, productivity, money, etc in your chosen area. Have a closer look at everything going in there. In case you are looking at your finances, just observe how many financial transactions, holdings, investments, accounts, advisors and such other complexities are there. Are they too many? Understand what and how you have been at a disadvantage due to this.

PRIORITISE

The next step is to prioritise. What is most important? What is the one thing you can and cannot live without? Organising into important and not important is an important step and you really would need to be strict here. Keep doing this till the time you feel you have a shortlist of the most important things that matter.

REDUCE

Once you have prioritised, the most critical action now is to remove the

things you do not need or do not really carry any real value for you. In finances, one could do this by consolidating your investments, closing unused accounts, closing policies that do not serve the real purpose of protection, moving portfolio with only one advisor, reducing debt, and so on. One has to be very ruthless here to remove things that do not matter.

ADD

It would be rare that you would need anything to be added to your chosen target area of decluttering. However, it is possible and perhaps even a good time to add the most important things which you have been missing out since long. In finance, a comprehensive financial plan could be the one thing you are likely to be missing out.

In short, here is what we have done

– subtract the obvious and add the meaningful. That is what declutter and simplicity is really about. Remember that you have succeeded in life when all you really want is only what you really need.

Simplicity in finance:

☑ **Simple expectations:** The major reason for mistakes, frequent churning and bad product choices is often exaggerated expectations. We need to have sound, grounded and long-term reasonable expectations and hold on to same at all times.

☑ **Declutter portfolio:** Most of us would likely have many insurance policies, bank FDs, small saving schemes and even mutual funds and equities. Time to have a strategy and remove the products that do not add real value.

☑ **Prioritise your goals:** One needs to prioritise one's goals. Often the random, small goals are given priority at the cost and compromise of long term big goals. This has to stop.

☑ **Have steady plans:** Frequent changing of your plans has many costs attached to it. Have a comprehensive financial plan and stick to it.

☑ **Have discipline:** Disciplined savings over the long term is the ideal and easiest way to create wealth. Start an SIP, keep growing your SIP and forget about it.

☑ **Reduce expenses:** If you look around, there are many unnecessary expenses around you. This is impacting your financial well-being, one expense at a time.

☑ **Do not run after ideas:** Do not chase ideas or stock tips or get-rich-quick schemes. It does nothing but adds uncertainty and complexity to your finances.

☑ **Do not make too many mistakes:** Not making too many mistakes or big mistakes in life is the surest way of letting your money grow and not protecting you from financial shocks.

Socrates once said, “the secret of happiness, you see, is not found in seeking more, but in developing the capacity to enjoy less.” If we all live to this principle in our lives, I am sure that our lives will be much happier, peaceful, rewarding and healthy. Let us commit ourselves to simplicity in all aspects of our lives and declutter thing which weighs us down, physically, mentally, emotionally and financially.

Shridatta Bhandwaldar
Canara Robeco AMC - Head - Equities

Shridatta Bhandwaldar is Head – Equities at Canara Robeco Asset Management Company, Robeco's joint venture in India. He comes with over 13 years of experience and is actively involved in managing the Canara Rebeco Equity Diversified Fund, Canara Rebeco Bluechip Equity Fund, Canara Rebeco Infrastructure, Canara Robeco Consumer Trends Fund, Canara Robeco Equity Tax Saver Fund, Canara Robeco Small Cap Fund, Canara Robeco Emerging Equities & Canara Robeco Equity Hybrid Fund.

Prior to joining Canara Robeco, Shridatta was Head of Research and Senior Equity Analyst with SBI Pension Fund Pvt. Ltd. He has also worked with other reputable names which include Heritage India Advisory Pvt. Ltd., Motilal Oswal Securities Ltd. and MF Global-Sify Securities Ltd.

Shridatta has successfully completed his MMS in Finance from University of Mumbai and B.E. (Mech) from Aurangabad University.

Q: What is your overall impression from the Union Budget? How would you rate it?

Answer: Overall the budget was a good balancing exercise, given lack of choices on fiscal expansion side. We think that there are three trends in what Government is trying to achieve through budget; 1) Improve portion of productive spending (capital expenditure at 14% of total expenditure) in budget, 2) Reforms in taxation (GST, Corporate tax cuts and simplification of personal tax regime over period) and ease of doing business and 3) Interest rate transmission through RBI which is keeping liquidity in huge surplus. All the above in combination will help the economy to improve from the current rate of 4.5% of GDP. Considering the approach of the government towards boosting the consumption to get economy on the healthier front, this budget looks to be positive for Indian landscape.

Q: Is it worth enough to opt for div. payout for the regular income goal? What would be your advice to the investors who have already invested in Dividend Plan of Equity Schemes for this purpose?

Answer: For all taxpayers with higher than 15% effective tax rate; switching out of dividend plans is a better option in new regime. Investors are better off shifting into growth plans in case of pure equity schemes or to SWP instead of dividend plans (those who need regular cash flows).

Q: What would be your say on the statement of Finance Minister that "Economy not in trouble and green shoots visible"?

Answer: While the economy seemed to have bottomed, its very difficult to say that Green shoots are visible around apart from latest PMI data and good monsoon and its impact of rural economy.

Q: What are your thoughts on inflow in the ELSS subcategory in the coming years considering the new tax regime in which 80C/ ELSS Deduction won't be available? And, as per the Fin. Ministry they are seeing that almost 69% assess would benefit from the New Tax Regime & they opt for it?

Answer: Its very specific based on current deduction being availed by an individual taxpayer.

Q: Is the right time to go bargain hunting in the mid and small-cap space?

Answer: Given the valuation correction that mid and small caps have witnessed over past 24 months, the odds in mid and small cap are better off to their position in the past 3 years. They have underperformed large caps by 25% and 40% respectively in past 3 years. However, only investors who have appetite for volatility and have an investment horizon of at least 3 years should venture into these categories.

Q: What are your views on the current market scenario? What is your future outlook for the market?

Answer: We see current market scenario to be constructive for equities from 2-3 years perspective (short term can be little muted). This view is driven by local factors like, 1) Government's reform agenda to attract foreign and domestic capital, 2) Interest rate transmission in the economy and 3) earnings recovery as GDP and nominal GDP growth rates recover to 5.5% and ~11% respectively over next 12-18months. Besides this, on bottom up basis, lot of companies across sectors are gaining market shares in this tough environment driving earnings growth superior to underlying sectors. Based on above factors, we expect earnings CAGR of 12-15% CAGR over next 3 years from our portfolios. Also, from India perspective, 1) structurally low energy prices and 2) globally low cost of capital will help the equities as an asset class.

MF NEWS

SBI Mutual Fund tops HDFC Mutual Fund as No 1 asset manager

SBI Mutual Fund has nudged ahead of HDFC Asset Management in January 2020, with total assets under management (AUM) of Rs 3.82 lakh crore. HDFC AMC is now the second biggest, with Rs 3.79 lakh crore of AUM. ICICI Prudential AMC is the third largest, with AUM of Rs 3.68 lakh crore. In equity assets, SBI MF is the largest player, with Rs 1.94 lakh crore of assets compared with HDFC Asset Management Company's Rs 1.54 lakh crore. In debt assets, SBI MF is second to HDFC MF, which has Rs 1.99 lakh crore of AUM, compared with SBI's Rs 1.63 lakh crore. SBI Mutual Fund has been a major beneficiary of a steady stream of equity inflows through the government run Employees Provident Fund Organisation (EPFO). The EPFO routes its equity allocation through index ETFs, which are managed by SBI and UTI MF. Lowering of deposit rates by government banks such as SBI has also led to more retail funds moving into mutual fund schemes.

SEBI urges mutual funds to create liquidity buffer for debt schemes

The Securities and Exchange Board of India (SEBI) exhorted the mutual fund industry to build an adequate 'liquidity buffer' for debt schemes to be better prepared for any event of a crisis in future. The capital markets regulator has also asked mutual funds to participate more in the voting process of company resolutions rather than abstain from them. SEBI said the ongoing credit crisis that resulted in returns of various debt mutual fund schemes taking sharp hits has brought to surface the kind of liquidity pressures that the industry could face. Last year in September, the regulator brought in compulsory liquidity buffer in overnight and liquid funds, where in funds were mandated to invest 20 per cent in liquid assets.
